& performance
proven over
20 years!*

B5 SERIES

GENERAL FEATURES

Waterworks B5 Series water coolers are proven to be the most reliable bottled water coolers available. They are engineered to the highest levels of quality and dependability. The B5 coolers are proven performers in Australia's harsh climate.

COLD WATER RESERVOIR: Hygienic type 304 stainless steel tank which provides superior chilling. The highly polished surface is easy to clean and maintain. Tank capacity 3.2 litres.

HOT TANK: Type 304 stainless steel. 500 Watt sheathed heater installed in the tank ensures accurate temperature control. On/Off switch is easily accessible at back of cabinet. Tank capacity 1.8 litres.

CABINET: Top and front panels are moulded of UV treated ABS and side panels are zinc coated steel sheets covered in electrostatically applied high polymer polyester resin.

COLOUR: High gloss cloud white available as standard.

TAPS: Durable polypropylene self-closing design. Fully recessed for protection, lever type, with fast flow for ease of operation. Hot safety tap available on hot/cold models. NSF approved.

DRIP TRAY: The removable drip tray is durable and dishwasher safe.

FUNCTION STATUS DISPLAY: This illuminates a green and red signal indicating the power/hot/cold position of the dispenser.

OPTIONS

NON SPLASH VALVE: Allows the bottle to be changed without excess spillage. Just place the bottle on the cooler and the valve opens to let water through. When removing the bottle, the valve automatically closes. The water flow is more constant and therefore there is less cyclic stress on the bottle for added safety against bottle fractures.

AQUANET FILTER (AN-1) The Waterworks AN-1 Aquanet Filter is specifically designed to compliment your B5 Series Cooler. Simply remove the patented No-Spill Spike assembly and replace it with an optional Waterworks scuff ring (SR-5) to provide a stable base for your gravity feed filtration system. The No Splash Valve mentioned above is also the ideal accessory for this configuration.
